Detection of Recurrent Bladder Cancer in Only 5 Minutes
... with the BTA stat Test

Bladder Cancer: A Common Disease That Requires Lifelong Management

Bladder cancer is the fourth most common cancer among men. One in five patients diagnosed with bladder cancer die from the disease. Bladder cancer recurs in over 50% of patients calling for regular testing and lifelong management.

Early Detection is the Key to Bladder Cancer Survival

Risk Factors For Bladder Cancer
- Tobacco smokers over 50 years of age
- Persons who have worked in the chemical, dye, metal, rubber or leather tanning industries
- Previous diagnosis of bladder cancer

Bladder Cancer Surveillance
The true clinical partner to Cytoscopy
- Simple collection allows for improved patient comfort and compliance

How it Works

Increased detection rates may result in fewer cancers missed and improved outcomes.
